DEMO SCENARIO GUIDE

Business Process Scenarios in the Demo Database

Every scenario seeded into WeCPQ + WeSAP — the exact records, how each one runs, and what to expect. Your cheat-sheet for a live demo.

What's inside

The database at a glance

> One reset lands both systems in this state. The data is deliberately shaped so you can walk a clean automation, an agent-handled exception, and a hard block — without any setup on stage.

CUSTOMERS

15 (8 original + 7 EMEA)

VENDORS / MATERIALS

8 vendors · 40 materials (5 per vendor) — WeSAP dropdown catalogue

QUOTES (WECPQ)

20 — 9 Won, plus Draft / Sent / Lost

SALES ORDERS (WESAP)

6 — incl. 1 credit-blocked; 3 Won quotes deliberately left with no order

PURCHASE ORDERS

6 → goods receipts, 4 supplier invoices (2 blocked)

SAMPLE CUSTOMER POS

3 — demo inputs the bot ingests (1 clean, 2 mismatched)

Scenarios What you can demo, step by step

Match Mismatch Block Baseline

Matches

MATCH Clean match — live bridge

WeCPQ → WeSAP

Trigger	Quote Q-2026-0005 (Meridian IT Group) — Won, no sales order
Customer PO	PO_Meridian_Q-2026-0005 (matches the quote exactly)
Value	€14,500 — within Meridian's €80,000 limit

How it runs: Bot reads the won quote from WeCPQ, matches the returned customer PO to it (prices & quantities agree), and creates the Sales Order in WeSAP. Product lines map to materials (PA-440 → MAT-0003); the deployment-services line stays as text.

Outcome: Sales Order created straight through, status Open. Clean, hands-free.

Robot

Mismatches (agent territory)

MISMATCH Price mismatch + unmatched line

WeCPQ → WeSAP

Trigger	Quote Q-2026-0009 (Vertex Software Labs) — Won, no sales order
Customer PO	PO_Vertex_Q-2026-0009
Price issue	Falcon Complete billed €110 on the PO vs €85 quoted
Line issue	"FortiCare 24x7 Support" has no WeSAP material

How it runs: Bot ingests the customer PO and compares it to the quote. It catches the price difference and can't map the FortiCare line to any WeSAP material.

Outcome: Agent flags a price mismatch and an unmatched line; a person confirms the correct mapping / price before the order is created.

Agent → People

MISMATCH Quantity mismatch that then trips credit

WeCPQ → WeSAP

Trigger	Quote Q-2026-0015 (Ironclad Security Partners) — Won, no sales order
Customer PO	PO_Ironclad_Q-2026-0015 — orders 30 firewalls vs 28 quoted
Value	€62,700 — over Ironclad's €40,000 limit

How it runs: Bot spots the quantity difference (30 vs 28). Once corrected and the order is created, the value exceeds Ironclad's credit limit.

Outcome: Agent flags the qty mismatch; on creation WeSAP blocks the order as Blocked (Credit) — two exceptions in one thread.

Agent → People

Blocks (pre-seeded, ready on load)

BLOCK Credit block (O2C, pre-seeded)

WeSAP

Record	Sales Order 1000000005 (Solstice Data Group)
Status	Blocked (Credit) on load
Why	€51,000 order vs €45,000 credit limit

How it runs: Already blocked in the data — open it from the sales-order list or the worklist.

Outcome: Demo the release: a person (or bot with policy) reviews exposure and releases the order to proceed.

People

BLOCK Price block (P2P, pre-seeded)

WeSAP

Record	Supplier Invoice 5100000002 (Palo Alto Networks)
Status	Blocked on load
Why	invoice price €2,300 vs PO €2,100 — exceeds 5% tolerance

How it runs: The classic invoice-bot exception. Open the blocked invoice; the reason is on the record.

Outcome: Agent investigates the discrepancy and communicates with the supplier; a person releases once resolved.

Agent → People

BLOCK Quantity block (P2P, pre-seeded)

WeSAP

Record	Supplier Invoice 5100000004 (Veeam)
Status	Blocked on load
Why	invoiced 40 vs 30 received on goods receipt 5000000004

How it runs: A 3-way-match failure driven by a short goods receipt.

Outcome: Agent reconciles receipt vs invoice; person approves the corrected quantity or a credit.

Agent → People

Baseline & pipeline

BASELINE Completed O2C chain

WeSAP

Record	Sales Order 1000000001 (Northbridge) — Paid
Chain	Delivery 8000000001 → Billing 9000000001 (Paid) → Payment 7000000002
Source	Quote Q-2026-0001, PO PO-NORTHBRIDGE-2026-0142

How it runs: A finished order to show the full Order-to-Cash document flow end to end.

Outcome: Every O2C stage visible in the document-flow panel; nothing to action.

BASELINE

Completed P2P chain + ready-to-pay

WeSAP

Paid	Invoice 5100000001 → Payment 7000000001 (PO 4500000001, Fortinet)
Matched	Invoice 5100000003 — matched, ready to pay

How it runs: Shows the P2P happy path already paid, plus a cleanly matched invoice you can pay live.

Outcome: Pay the matched invoice on stage to complete a P2P cycle without any exception.

Robot

BASELINE

O2C pipeline — every stage on load

WeSAP

Open	SO 1000000004 (Harbor Networks)
Delivered	SO 1000000002 (Datapoint), SO 1000000006 (Silverline)
Billed	SO 1000000003 (Cirrus Cloud Services)
Paid	SO 1000000001 (Northbridge)

How it runs: Sales orders are spread across every status so the pipeline looks alive the moment you log in.

Outcome: Useful backdrop — filter the sales-order list by status to show the funnel.

Summary All scenarios at a glance

SCENARIO	TYPE	TRIGGER RECORD	TO-BE HANDLER
Clean match — live bridge	MATCH	Quote Q-2026-0005 (Meridian IT Group) — Won, no sales order	Robot
Price mismatch + unmatched line	MISMATCH	Quote Q-2026-0009 (Vertex Software Labs) — Won, no sales order	Agent → People
Quantity mismatch that then trips credit	MISMATCH	Quote Q-2026-0015 (Ironclad Security Partners) — Won, no sales order	Agent → People
Credit block (O2C, pre-seeded)	BLOCK	Sales Order 1000000005 (Solstice Data Group)	People
Price block (P2P, pre-seeded)	BLOCK	Supplier Invoice 5100000002 (Palo Alto Networks)	Agent → People
Quantity block (P2P, pre-seeded)	BLOCK	Supplier Invoice 5100000004 (Veeam)	Agent → People
Completed O2C chain	BASELINE	Sales Order 1000000001 (Northbridge) — Paid	—
Completed P2P chain + ready-to-pay	BASELINE	Invoice 5100000001 → Payment 7000000001 (PO 4500000001, Fortinet)	Robot
O2C pipeline — every stage on load	BASELINE	SO 1000000004 (Harbor Networks)	—

Handler tags follow the Robot / Agent / People model: Robot runs the happy path, Agent investigates & communicates, People approve or resolve what the agent can't.
